11 of the internal box 2.

(57) Abstract:

COPYRIGHT: (C)1998,JPO

PROBLEM TO BE SOLVED: To prevent deformation of a side surface of an external box to constitute a refrigerator body.

SOLUTION: In a refrigerator body where the thickness B of a wall above a recessed part 10 of an internal box 2 to hold right and left sides of a partitioning body 8 is smaller than the thickness A of a wall below the recessed part, a downwardly inclined surface 12 is formed between the right and left sides of the partitioning body 8 in the longitudinal direction, and an upwardly inclined surface 13 opposite to the inclined surface 12 on the partitioning body 8 side is formed in the recessed part 10 of the internal box 2. In a refrigerator body where the thickness A of a wall above a recessed part 11 of the internal box 2 to hold right and left sides of a partitioning body 9 is larger than the thickness B of a wall below the recessed part, an upwardly inclined surface 14 is formed between the right and left sides of the partitioning body 9 in the longitudinal direction, and a downwardly inclined surface 15 opposite to the inclined surface 14 on the partitioning body 9 side is formed in the recessed part
